PEGGY · RESEARCH ASSISTANT

Research that cites itself.

Peer-reviewed Evidence Gathering, Grounding & Yielding knowledge

Peggy is an evidence-grounded research assistant that supports the research journey from the first idea to the interpretation of results. She helps researchers understand what is already known, make better-informed design decisions and keep the moving parts of a project connected.

WHAT PEGGY DOES

01 · Explore the evidence

Searches project literature for potential gaps and open questions, and checks aims and objectives against the papers available.

02 · Shape the study

Supports study design with evidence-informed prompts and checklists for samples, methods, analysis and ethics.

03 · Keep work connected

Tracks objectives, status and history, and flags linked work when an objective changes. Helps bring proposals and budgets into the same workflow.

04 · Interpret results

Compares findings with published literature and highlights methodological differences, including covariates used in other studies.

HOW PEGGY HELPS

- Traceable answers: claims link to supporting passages and sources.
- Source awareness: distinguishes peer-reviewed papers, preprints and unverified sources; retracted papers are excluded.
- Clear limitations: indicates when evidence is thin rather than presenting uncertainty as fact.
- Researcher in control: suggested changes require approval.
- Privacy-conscious data profiling: raw participant-level rows stay in the browser; only summaries a researcher chooses to share are used.

WHY IT MATTERS

Peggy is designed to reduce time spent switching between papers, spreadsheets and documents; make evidence easier to check; and help researchers see how decisions in one part of a project affect the rest.

One connected workspace. Better visibility from research question to results.

WHO PEGGY SUPPORTS

RESEARCHERS

Spend less time navigating disconnected sources and documents. Keep evidence, decisions and project changes visible in one place.

POSTGRADUATE STUDENTS

Get structured support to move from a research idea to a defensible proposal, while learning to evaluate evidence and justify design choices.

SUPERVISORS

Gain clearer visibility of students' aims, evidence base and project progress, making it easier to review decisions and identify gaps early.

BUILT TO SUPPORT RESEARCH — NOT REPLACE RESEARCHERS

Peggy is not a replacement for supervisors, statisticians, systematic reviews or ethics committees. Researchers remain responsible for scientific judgement, verification and final decisions.
